F. X. Pi-Sunyer, MD, MPH
Professor of Medicine
Columbia University

Research Summary:

Dr. Pi-Sunyer’s research interests have focused on obesity and type 2 diabetes. He has been interested in food intake regulation, particularly the effect of gut peptides. He has also studied the pharmacotherapy of overweight in diabetic and non-diabetic patients. He is the co-Director of the NIH-sponsored New York Obesity Nutrition Research Center (NYONRC), Professor of Medicine, and on the faculty of the Institute of Human Nutrition at Columbia University Medical Center (CUMC). He is the PI of an NIH T32 post-doctoral training grant on obesity. He is the Principal Investigator at CUMC for four NIH-sponsored multi-site clinical trials: the Diabetes Prevention Program, the LookAhead study, the LifeMoms trial and the GRADE trial. He is on the Steering Committee of each of the 4 studies and co-Chair and on the Executive Committee of Look AHEAD. He has been the PI for numerous pharmaceutical Phase 2 and 3 trials of drugs for obesity and diabetes. He has published over 400 articles on translational research on diabetes, obesity and nutrition. He has been the director of the NYONRC Hormone and Metabolite Core Laboratory for 34 years and of the Columbia Diabetes Research Center Hormone and Metabolite Core Laboratory for 11 years. He has served on numerous NIH Study Sections, on the FDA Science Advisory Committee, on The Dietary Guidelines for Americans Advisory Board in 2005 and 2010 and on numerous Institute of Medicine expert panels.
